Installation

In order to run this project, run an Apache/MySQL local server, I preferred to use XAMPP. Import the code from "crm.db" file(locates in the "Database" folder) to create the Database with the users.

Inside the xampp folder find htdocs and paste the "PJ04.02 Web Developer" folder. Then open a browser and link the path at the index.php file(for example : http://localhost/PJ04.02%20Web%20Developer/index.php?)

Technologies and tools used on this project :

1. PHP

2. MySQL

3. XAMPP

Working Hours to execute this project : 6.5-7 hours.

Feature Updates :

1. Add Users

2. Delete Users

3. Modify Users
